AI COMMUNICATIONS STRATEGIST | DEVELOPER RELATIONS | TECHNICAL STORYTELLING

AI systems and communications leader with 10 years translating complex technology, emerging behavior, and community signals into credible narratives, user education, executive decisions, and operational change. Combines brand trust, developer-facing storytelling, community programs, and cross-functional communications with hands-on Python, TypeScript, and agentic workflow building. Makes unfamiliar systems legible without treating the technology as a black box.

CORE CAPABILITIES

- AI, product, and engineering communications; technical storytelling; executive translation; editorial framing; decision-ready writing
- Developer and community education; social listening; issue response; audience research; feedback loops; cross-platform programs
- Brand trust; misinformation defense; source authority; GEO / AEO; AI-answer visibility; evidence-backed narrative strategy
- Stakeholder alignment across Product, Engineering, Legal, Support, PR, Social, vendors, communities, and external partners
- Python; TypeScript / JavaScript; React / Next.js; Node.js; OpenAI APIs; Claude; local models; GitHub; Chrome extensions

PROFESSIONAL EXPERIENCE

Ledger | AI Systems Builder, Brand Trust & AI Visibility

Contract | July 2024 - Present | Public title: Communications Manager, Brand Trust & AI Visibility

- Built Ledger's Defensive Communications function from zero to one, creating governed AI workflows, response playbooks, stakeholder review loops, source-of-truth surfaces, and approval-aware messaging.
- Translated technical, policy, product-trust, and community signals into decision-ready narratives and operating changes for executives, frontline teams, vendors, and external partners.
- Built AI-assisted source-authority and answer-visibility workflows that improved AI-generated answer visibility from approximately 40% to more than 51% sustained while nearly doubling Ledger-owned citation share.
- Reduced response times by 70% through clearer ownership, standardized escalation logic, pre-approved messaging, and reusable evidence-backed materials.
- Led global vendor and community operations across Reddit, Discord, YouTube, and X, covering millions of annual interactions and routing sensitive issues into accountable internal review paths.
- Designed communications patterns across PR, Support, Social, Product, Legal, affiliates, vendors, and partners so evidence, review state, and decision paths remained visible.

Velcrafting LLC | Founder & AI / Full-Stack Engineer

July 2016 - Present

- Build AI services, agentic workflow tools, local-first prototypes, social-intelligence systems, and brand-trust infrastructure for technical and non-technical users.
- Publish technical work through Velcrafting and Vel-Labs across agent orchestration, local-first AI, model evaluation, EVM agent authority, developer tooling, and reliability/governance.
- Turn ambiguous technical systems into working demonstrations, clear documentation, structured requirements, adoption guidance, and evidence-backed narratives.
- Create reusable AI-assisted research and development workflows with validation gates, human approval boundaries, visible review state, and claim/evidence separation.
- Earlier work spans creator, client, Web3, and enterprise IT programs across brand development, community operations, digital strategy, analytics, infrastructure modernization, onboarding, and audience growth.

SELECTED COMMUNICATIONS & DEVELOPER PROOF

- GEO Lens | Chrome extension: Built and packaged a live-page audit workflow for search, AI-answer visibility, source authority, and citation readiness without stored API keys.
- Trust Hardens Clarity: Published an open-source methodology and review application for turning trust claims into evidence-backed software, documentation, and agent workflows.
- CareSight Hub | TypeScript / Python / local ML: Built and documented a local-first caregiver awareness MVP with bounded records, inspectable history, and explicit human review. github.com/Vel-Labs/CareSight
- ClearIntent: Built an autonomous-agent authority layer with live-bound ENS, OG write/read audit records, KeeperHub workflow proof, and local contract tests.
